

METEOR 1600C WEATHER RADAR

Based on C-Band klystron technology, the METEOR 1600C offers the sophisticated weather detection and warning capabilities required in clutter-pollute environments. Its technological superiority is the result of a fully coherent system design, offering optimum detection capability with maximum clutter suppression.

The METEOR 1600C is streamlined for medium range applications and close to ground observations that are more impacted by ground clutter such as airport terminal usage and the specific needs of aeronautical users. In combination with Rainbow® 5, the most up-to-date software package available to meteorological users, the METEOR 1600C is optimized for the detection of hazardous weather phenomena including micro bursts, wind shear, and gust fronts.
